

# [2021.09] Google Sheet exercise (Supervised Learning) (Linear Regression) (Age, Height)

## Video

1. First, watch this 4-min. video [here](#)

## Exercise

1. Then create a new Google Sheet document.
2. Now do the same as in the video above, but use the data on the right.

A	B
age (years)	height (cm)
1	75
3	92
5	108
7	121
9	130
11	142
13	155

**Questions:**

- How tall is a person at the age of 70? 524? **cm**
- What do you think about our data set?
- What is the model in this solution?

If you like to know how to calculate the solution, see video (part 1 og 2) [here...](#)
